

Groupby

The groupby method allows you to group rows of data together and call aggregate functions

```
In [*]: 1 import pandas as pd
        2 # Create dataframe
        3 data = {'Company': ['GOOG', 'GOOG', 'MSFT', 'MSFT', 'FB', 'FB'],
        4          'Person': ['Sam', 'Charlie', 'Amy', 'Vanessa', 'Carl', 'Sarah'],
        5          'Sales': [200, 120, 340, 124, 243, 350]}
```

```
In [32]: 1 df = pd.DataFrame(data)
```

```
In [33]: 1 df
```

```
Out[33]:
```

	Company	Person	Sales
0	GOOG	Sam	200
1	GOOG	Charlie	120
2	MSFT	Amy	340
3	MSFT	Vanessa	124
4	FB	Carl	243
5	FB	Sarah	350

Now you can use the `.groupby()` method to group rows together based off of a column name. For instance let's group based off of Company. This will create a **DataFrameGroupBy** object:

```
In [34]: 1 df.groupby('Company')
```

```
Out[34]: <pandas.core.groupby.DataFrameGroupBy object at 0x113014128>
```

You can save this object as a new variable:

```
In [35]: 1 by_comp = df.groupby("Company")
```

And then call aggregate methods off the object:

```
In [36]: 1 by_comp.mean()
```

```
Out[36]:
```

Sales	
Company	
FB	296.5
GOOG	160.0
MSFT	232.0

```
In [37]: 1 df.groupby('Company').mean()
```

```
Out[37]:
```

Sales	
Company	
FB	296.5
GOOG	160.0
MSFT	232.0

More examples of aggregate methods:

```
In [38]: 1 by_comp.std()
```

```
Out[38]:
```

Sales	
Company	
FB	75.660426
GOOG	56.568542
MSFT	152.735065

```
In [39]: 1 by_comp.min()
```

```
Out[39]:
```

Person Sales		
Company		
FB	Carl	243
GOOG	Charlie	120
MSFT	Amy	124

```
In [40]: 1 by_comp.max()
```

```
Out[40]:
```

	Person	Sales
Company		
	FB	Sarah 350
	GOOG	Sam 200
	MSFT	Vanessa 340

```
In [41]: 1 by_comp.count()
```

```
Out[41]:
```

	Person	Sales
Company		
	FB	2 2
	GOOG	2 2
	MSFT	2 2

In [42]:

1by_comp.describe()

Out[42]:

		Sales
Company		
FB	count	2.000000
	mean	296.500000
	std	75.660426
	min	243.000000
	25%	269.750000
	50%	296.500000
	75%	323.250000
	max	350.000000
GOOG	count	2.000000
	mean	160.000000
	std	56.568542
	min	120.000000
	25%	140.000000
	50%	160.000000
MSFT	75%	180.000000
	max	200.000000
	count	2.000000
	mean	232.000000
	std	152.735065
	min	124.000000
	25%	178.000000
	50%	232.000000
	75%	286.000000
	max	340.000000

```
In [43]: 1 by_comp.describe().transpose()
```

Out[43]:

Company												FB			(
	count	mean	std	min	25%	50%	75%	max	count	mean	...	75%					
Sales	2.0	296.5	75.660426	243.0	269.75	296.5	323.25	350.0	2.0	160.0	...	180.0					

1 rows x 24 columns

```
In [44]: 1 by_comp.describe().transpose()['GOOG']
```

Out[44]:

	count	mean	std	min	25%	50%	75%	max
Sales	2.0	160.0	56.568542	120.0	140.0	160.0	180.0	200.0

Great Job!
